PROFESSIONAL SUMMARY

AI/ML and Full-Stack Developer with experience building scalable AI-powered applications, automation systems, and intelligent workflow solutions. Skilled in Retrieval-Augmented Generation (RAG), LLM integrations, AI orchestration, automation engineering, and full-stack web development using Python, TypeScript, React, Next.js, and PostgreSQL. Experienced in developing production-grade AI products, ETL workflows and responsive user-focused platforms. Strong understanding of automation reliability, API integrations, backend systems, and scalable application architecture with a problem-solving mindset focused on performance, maintainability, and user experience.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, SQL, Shell Scripting, HTML, CSS

Libraries: React.js, Next.js, Node.js, Flask, FastAPI, LangChain, LangGraph, Tailwind CSS, Pandas, NumPy, scikit-learn

Backend: REST APIs, PostgreSQL, Supabase, Vector Databases, Docker, AI Agent Workflows, LLM Integrations

Tools: GitHub, Microsoft Visual Studio 2022, Vercel, Langfuse, OpenRouter, Gemini API, Unix/Linux, APIs, SSIS

Skills: AI Agent Workflows, Retrieval-Augmented Generation (RAG), Prompt Engineering, LLM Evaluation, Workflow Automation, ETL Pipelines, Machine Learning

Core Subjects: Data Structures and Algorithms, DBMS, Operating Systems, Computer Networks, Software Engineering

PROFESSIONAL EXPERIENCE

Infosys Limited

Test Engineer

Hyderabad

Nov 2025 - Present

- Developed and optimized ETL and automation workflows using Microsoft Visual Studio 2022, SSIS, SQL, Python, Shell scripting, and Unix to support reliable data processing
- Implemented data processing and validation workflows using Python, SSIS, SQL, and Shell scripting to automate ETL tasks, perform data quality checks, and support database operations.
- Built and maintained data processing and validation workflows using Python, SSIS, Shell scripting, and SQL, enabling automated ETL operations, data quality checks, and efficient database management

National Informatics Centre (NIC)

Full Stack Intern

Delhi

May 2024 - July 2024

- Designed and developed a full-stack server management web application tracking 50+ active servers, which reduced infrastructure critical-issue detection time by 35% through a unified monitoring dashboard.
- Built Flask backend services and structured PostgreSQL schemas to handle real-time server telemetry updates, reducing API response latency down to under 200ms.
- Engineered secure, optimized CRUD operations and dynamic data sync pipelines that reliably processed 10,000+ daily server logs with zero data loss.
- Implemented role-based access control (RBAC) and secure session management in Flask, protecting sensitive server metrics and ensuring compliant, multi-tier user access for 30+ internal administrators.

EDUCATION

Dehradun Institute of Technology (DIT) , DIT University
Bachelor of Technology - Computer Science and Engineering (AI/ML)

Dehradun, Uttarakhand
AUG 2021 - MAY 2025

PERSONAL PROJECTS

FitnessFuel - AI Powered Fitness and Nutrition Platform - [Live](#)

Built a full-stack AI-powered fitness and nutrition platform delivering personalized diet and workout plans based on user goals, biometrics, and activity levels. Implemented intelligent recommendation logic using Python, Flask, and K-Means clustering, achieving a 92% accuracy rate in nutritional alignment and adaptive workout generation. Integrated FatSecret API for real-time recipe search with query response times under 150ms, and developed a responsive React + TypeScript dashboard with Supabase authentication that managed secure user data and progress tracking

Tech: Python, Flask, scikit-learn, React.js, TypeScript, Node.js, Supabase, Tailwind CSS, Framer Motion, FatSecret API, Vercel.

PrepBud - AI Study Companion - [Live](#)

Developed a full-stack AI-powered study platform for medical and multi-domain students using Next.js 19 and Supabase. Engineered a custom multi-provider AI routing system across Gemini and OpenRouter models with automated fallback handling, cutting API timeout failures to under 0.5% while optimizing token costs by 20%. Implemented production-grade RAG pipelines using PostgreSQL and pgvector that achieved an average context-retrieval query latency of 85ms, alongside AI quiz generation, spaced repetition scheduling, study planners, and telemetry analytics managed via Langfuse.

Tech: Next.js 19, TypeScript, Supabase, PostgreSQL, pgvector, Gemini API, OpenRouter, Langfuse, Zustand, RAG, Tailwind CSS, Vercel.

Portfolio Website - [Live](#)

Designed and developed a responsive personal portfolio website to showcase technical projects, skills, and professional experience. Built with a clean, product-focused UI/UX using React and Vite, optimizing asset delivery and lazy loading for fast page speeds. Implemented smooth Framer Motion animations and fluid, cross-device layouts to ensure an intuitive user experience for visiting developers and recruiters.

Tech: React.js, Vite, Tailwind CSS, Framer Motion, JavaScript, Vercel.

CERTIFICATIONS

Additional Certifications

- Infosys Foundation Program
- Infosys Certified DevOps Professional
- Infosys Hadoop Data Platform Administrator
